

HowTo - Install OWNCLOUD and PHPMYADMIN on Illumos

V1.3 by effemmess (fmo)

Please help to optimize!

Installation

ssh to your home-directory

download the package

wget <http://pub.comnetonline.de/iamp-1.3-setup.tgz>

Decompress the tar-archiv

tar xvfz iamp-0.3-setup.tgz

cd iamp-0.3-setup

./addin.sh

Answer the questions!

That's all!

To Do

(not in any order!)

- Testing other Illumos-OS
- Optimize “read”
- Optimize download of actual packages (pkgin install 'foo<5.0')(install_paket() necessary?)
- SMF MySQL
- Test and/or implement other webserver
- \$PATH to .profile?
- Menu in napp-it to edit configuration files
- Download as an addin/extension from napp-it-website with initial-script
- Backup and import of existing owncloud-DB
- Install newest owncloud without preconfigured package from repo
- Splitting in IAMP and IAMPOP?
- Log installation
- Other code-optimization

Have fun!
